A specific case shows that existing formulas do not take
into account a number of important factors which greatly
influence hydraulic losses through trashracks. Because
of these factors and the peculiarities of the trashrack
construction, it is necessary to rake the trashracks
during summer and fall periods. (Author)

no. 7, p. 86-88.

DESCRIPTORS: *Insecticides, Fumigation, *Meth-

By chemical analyses it was established that methyl
bromide is absorbed to a very small extent by the
majority of products, and it is removed from them
quickly and almost completely by ordinary airing.
Methyl bromide in the products is quickly decomposed
with the formation of inorganic bromine salts the
amount of which in one kg of the product amounts to
1/100-1/200 of the medical dose of bromine. Ex-
